

Set 1:

1. Write a C program to insert a node at the beginning of the linked list.
2. Write a C program to merge two files into a third file.

Set 2:

1. Write a C program to insert a node at the end of the linked list.
2. Write a program to copy the contents of one file into another. Copy character by character.

Set 3:

1. Write a C program to insert a node at the specified position in the linked list.
2. Write a program to copy the contents of one file into another. Copy character by character using command line arguments

Set 4:

1. Write a C program to delete a node from the beginning of the linked list.
2. Write a C program to merge two files into a third file using command line arguments

Set 5:

1. Write a C program to delete a node from the end of the linked list.
2. Write a c program to print the report card for a student using structures. Read the student rollno, name, marks in 6 different subjects. Calculate total marks and average. Consider the following criteria for printing grades.
 - a) If average $\geq 90\%$ print 'O' grade
 - b) If average $\geq 80\%$ and $< 90\%$, print 'A+'
 - c) If average $\geq 70\%$ and $< 80\%$, print 'A'
 - d) If average $\geq 60\%$ and $< 70\%$, printf 'B+'
 - e) If average $\geq 50\%$ and $< 60\%$, printf 'B'
 - f) If average $\geq 40\%$ and $< 50\%$, printf 'C'
 - g) If average < 40 or in any subject marks is < 40 , print 'F'

Set 6:

1. Write a C program to delete a node from the specified position in the linked list.
2. Write a C program to generate payslip of an employee, Read the Employee ID, Name, Department and basic salary of an employee and calculate HRA as 20% of basic, DA as 10% of Basic. Calculate the gross salary and print the payslip.

SET 7:

1. Write a C program to search for a key element in a linked list.
2. Write a C program to access student data using the concept pointer to a structure.

Set 8:

1. Write a C program to sort the contents of the linked list.
2. Write a C program to explain the concept of Nested Structures.

Set 9:

1. Use the concept of array of structures and write a C program to store the information of a book in the library. Store book information like book title, author, price, edition, publisher etc.
2. Write a C program to insert a node at the specified position in the linked list.

Set 10:

1. Use the concept of array of structures and write a c program to print the report card for all the students of a class. Read the student rollno, name, marks in 6 different subjects. Calculate total marks and average. Consider the following criteria for printing grades.
 - h) If average $\geq 90\%$ print 'O' grade
 - i) If average $\geq 80\%$ and $< 90\%$, print 'A+'
 - j) If average $\geq 70\%$ and $< 80\%$, print 'A'
 - k) If average $\geq 60\%$ and $< 70\%$, printf 'B+'
 - l) If average $\geq 50\%$ and $< 60\%$, printf 'B'
 - m) If average $\geq 40\%$ and $< 50\%$, printf 'C'
 - n) If average < 40 or in any subject marks is < 40 , print 'F'
2. Write a C program to delete a node from the specified position in the linked list.

Set 11:

1. Write a C program to perform the addition of two complex numbers using functions by passing the entire structure variable as argument.
2. Write a C program to search for a key element in a linked list.

Set 12:

1. Write a C program to perform the multiplication of two complex numbers using functions by passing the entire structure variable as argument.
2. Write a C program to sort the contents of the linked list.
